

**FOR IMMEDIATE RELEASE**

**eBizDocs Renews SOC2 Type II Certification**

*Audit Validates eBizDocs' Commitment to Provide  
Certified Security and Availability to Customer Data*

**Albany, NY. November 8, 2021** – eBizDocs, a premier electronic content solutions provider, announced it renewed its Service Organization Controls 2 (SOC2) Type II attestation. The Moore Group conducted the audit and review of eBizDocs' operational controls. eBizDocs continues to differentiate itself by certifying its ability to protect customer data and successfully demonstrate its capability to meet all the relevant trust services criteria for security and availability.

This SOC 2 audit confirms eBizDocs sustained ability to deliver enterprise-grade solutions, that scale to the needs of Public Sector, Small-to-Midsize Businesses (SMB), and Enterprise level clients. “We are pleased to demonstrate our ability to meet the stringent trust services criteria. This attestation allows our customers to demonstrate to their clients and shareholders they only select vendors who exhibit having the necessary precautions in place to protect intellectual and private data,” said [Jason Abare](#), Vice President, eBizDocs.

In support of a remote workforce, organizations are making a digital transformation to make traditional paper documents and microfilm accessible as digital files beyond the office boundaries. eBizDocs helps public and private organizations, such as NY State Department of Health and Greenbush Financial, perform this digital transformation and securely put information at the fingertips of its remote workers.

System Organization Control (SOC) is a technical auditing process used to validate the systems and controls designed by an organization to secure its customer data. To comply with SOC2, organizations must establish rigorous security policies and procedures in accordance with AICPA standards. SOC2 reports are conducted by independent auditors, who measure the availability and security of an organization's unique data processing systems, and ultimately determine whether effective safeguards and controls are in place. The purpose of SOC standards is to provide confidence and peace of mind for organizations when they engage third-party vendors.

“This rigorous validation of the high standards we follow for our operating practices, products, and services assures customers we meet the most demanding requirements for protecting their critical and sensitive information,” said [Howard Gross](#), CEO, eBizDocs.

The SOC 2 Type II certification is among the most coveted and hard to obtain information-security certifications. It demonstrates that an independent accounting and auditing firm examined an organization's reporting control objectives and activities, and additionally sampled those controls over time to ensure they are operating effectively.

The Moore Group's testing of eBizDocs' controls included examination of policies and procedures regarding network connectivity, firewall configurations, computer operations, logical access, data transmission, backup and disaster recovery, and other critical operational areas. Upon completion of the audit, eBizDocs received a Service Auditor's Report with a favorable opinion demonstrating that their policies, procedures, and infrastructure meet or exceed the stringent SOC 2 Type II criteria.
